

CFM Olympic Brainz Monitor

Simplifying Bedside Cerebral
Function Monitoring

by anandic

natus

Your trusted partner in the NICU, providing actionable neurological information during critical times.

- Easy bedside setup; plug-in the unit, apply the electrodes and record
- Intuitive navigation and versatile patient settings
 - up to three-channel, cross-cerebral or right and left hemisphere monitoring
 - easily add an additional channel to an existing single-channel set-up
- Disposable electrodes help reduce the risk of infection

New Features

- Enlarged all-in-one 17" touchscreen monitor
- Enhanced security with Windows® 10
- Faster computer processing speed
- Background Pattern classification (BPC) software
- RecogniZe seizure detection software

Simple, Automated, Secure – for optimal cerebral function monitoring

Simple

A product that will change the way you administer care to the most delicate of patients.

The Olympic Brainz Monitor (OBM) provides continuous cerebral function monitoring at your fingertips. The easy-to-use system with easy-to-apply electrodes provides quick and simple routine bedside monitoring. System-based online help provides a step-by-step guide for both setup and patient preparation, allowing you to start monitoring in minutes. The larger touchscreen allows for easier review of patient data at the bedside. It's as easy as:

- plug in the unit
- apply the electrodes
- start recording

Automated

Two unique automated software applications assist in recognizing background patterns and indicate if seizure activity may be present.

These automated software applications provide data and alerts at the bedside, indicating to clinicians a change in cerebral function. They also provide useful information during clinical consultation. CFMsight provides enhanced signal display for easier trace interpretation. With the OBM, the newborn can remain in the NICU for their basic neurological assessment.

Secure

Ensuring security of patient data is a priority today.

The OBM is built on the Windows 10 operating system, providing enhanced, comprehensive and continuous security for patients - and their data. Our CFM Viewer software ensures data is encrypted to support secure remote review and analysis of recorded patient data.

Cerebral Function Monitoring (CFM) applications for use

CFM is becoming a standard of care in the NICU for neuromonitoring. The OBM's proven track record provides optimal cerebral function monitoring solutions and may have useful prognostic indication for the following newborn conditions:

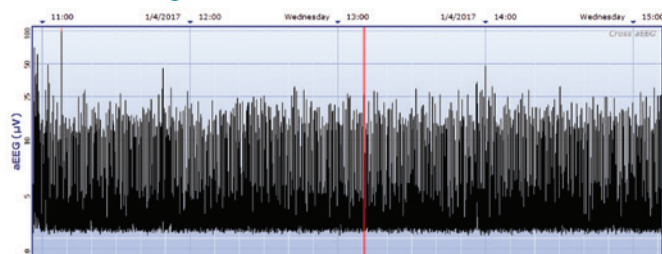

- Hypoxic Ischemic Encephalopathy (HIE)
- Newborns receiving therapeutic hypothermia
- Preterm newborns
- Infants with Intraventricular Hemorrhage (IVH)
- Monitoring newborns with confirmed or suspected seizure activity
- Neonatal Abstinence Syndrome (NAS)
- Surgical and Cardiac newborns
- Newborns with inborn errors of metabolism
- Sedated and ventilated newborns

Additional features

- CFMsight provides enhanced signal display for easier trace interpretation

Without CFMsight:

With CFMsight:

- RecogniZe and BPC software notification alerts draw the attention of the caregiver to suspected seizure activity or changes in the background pattern
- Customizable, time-stamped markers help track bedside caregiving activities, making reviewing easy and efficient either at the bedside or when viewed remotely
- Continuous impedance view provides the caregiver with immediate information about potential contact issues with individual electrodes
- Disposable hydrogel and low-impedance needle electrodes are supported through standard touchproof connectors
- Easy to archive, restore, review and share patient data using the dedicated OBM Viewer software
- Network printer connectivity

CFM Olympic Brainz Monitor

General Specifications

TOUCHSCREEN MONITOR

Weight	12.35 lb (5.6 kg)
Dimensions	13.31 x 15.12 x 2.72" (338 x 384 x 69 mm)

DATA ACQUISITION BOX (DAB)

Weight	10 oz (280 g)
Dimensions	2.98 x 5.75 x 1.23" (75.7 x 146.1 x 31.2 mm)

ROLL STAND

Weight	40 lb (18 kg)
Dimensions	61.5" height, 25" base diameter (1562 mm height, 635 mm base diameter)

OPERATION (ALL COMPONENTS)

Temperature	32° - 104° F (0° - 40° C)
Relative humidity	25% - 90% at 40° C (non-condensing)

Display	Real-time EEG waveform Rapid pens (aEEG, Impedance) - Computed Rapid numeric (Impedance) - Computed Histogram distribution over 15-second intervals (aEEG, Impedance) Color TFT LCD with resistive touchscreen, 17" (432 mm) diagonal, TFT color, 1280 x 1024 pixel native resolution
---------	---

POWER SUPPLY (INTEGRATED)

Power supply unit	External power adapter, medical grade
Power supply input voltage	100 - 240 VAC, 50/60 Hz, 1.6 - 0.7A
EEG specifications sensitivity	50 μ Vpk full scale maximum sensitivity (< 1 μ V/mm)
Dynamic range	0.30 - 10000 μ Vpp (1-20 Hz)
Update rate	200 Hz (EEG Waveform)

DATA ACQUISITION BOX (DAB) SPECIFICATIONS

Differential channels	3
Frequency response	0.5 Hz ~ 450 Hz
Analogue to digital converter	SAR ADC (16x oversampling)
Sampling rate	2000 Hz
Resolution	16 bits
Sampling quantization	300 nV
Input impedance (DC)	> 50 M Ω
